PROVIDERS ABSENT

Poverello

I. Welcome/Introductions

The meeting was called to order at 9:44 a.m. CQM Support Staff welcomed everyone and individual introductions were made.

II. Using Root Causes to Develop Interventions/Action Plans

The CQM Support Staff began the discussion with asking the Network to consider the root causes constructed using the Quality Improvement Project (QIP) documentation tool. The Network was prompted to discuss how their root causes informed the intervention they are considering for their QIPs.

Broward House

Broward House is looking to impact their youth population. They want to initiate a survey tailored to young clients in assessing their needs and recommendations of services offered by Broward House.

Furthermore, Broward House is seeking to use data collected from these surveys to inform an intervention that would have the most positive results within this client population.

AIDS Healthcare Foundation

AHF is targeting their youth population for their QIP. They have had a meeting with their peers, case management, and healthcare center staff to brainstorm barriers to care for the youth population. As a result of this meeting, they decided that it would be more efficient to talk to their youth clients about the barriers they are experiencing.

AHF has developed a one-page assessment that peers will distribute to youth clients for completion. This will be a part of a short interview and will inform AHF on the clients' barriers to care and suggest what interventions could best address the barriers that are significant in their Assessment data collection sample.

Latinos Salud

Latinos Salud began by implementing a CLEAR (Choosing Life: Empowerment, Action, Results!) intervention. This is an evidence-based HIV prevention and health promotion intervention for youth and adults. However, a case manager shared that the CLEAR intervention is an internal referral to him for cases that need to be closed out. The quality representative from Latinos Salud attested that he had to be flexible with the case manager in their implementation of CLEAR as part of the agency's QIP.

The CQM Consultant stated that there is a significant difference in low-volume agencies and high-volume agencies. For low-volume agencies to achieve noteworthy results, they can target a smaller pool of clients. However, large-volume agencies must target a larger pool of clients for their intervention to have a statistically significant impact.

BRHPC-CIED

The CIED Coordinator noted that they have decided to utilize an additional survey question regarding access to care. They are targeting Black/African American & Latina women. She noted that among people answering the survey, only half of the people completing the Survey answered the additional question posed that is part of their QIP. CIED is currently brainstorming on what other interventions could be used to assess access to certification barriers.

FL-DOH

Florida Department of Health in Broward are currently utilizing a triage of transportation services in efforts to decrease no-show rates. They offer Uber, bus passes, and the option for a Department of Health employee to pick clients up. The first option offered to clients by case managers and outreach workers is bus pass followed by employee pick-up and lastly, Uber.

Broward Community & Family Health Centers

Broward Community & Family Health Centers (BCFHC) initially began targeting Black/African American & Latino women, but upon further analysis they discovered that viral load suppression of their population of black males were actually of more concern and significantly lower than their benchmark. They plan to change their aim statement and focus on the Black/African American & Latino men population instead. They currently have a sample size of roughly 22 clients within this population who are virally unsuppressed. They are working with their transportation department in coordinating transportation for clients who are homeless. The Quality Manager noted that they are exploring a revision of their policies to allow for alternative places for client pick-ups due to unstable housing.

A provider noted that one barrier that they experience is when clients are ineligible for service. He asked CIED about their protocols and interventions for addressing client eligibility prior to receiving services.

The CIED Coordinator stated that if any provider finds that a client has lost their eligibility, they should call the CIED main office at Broward Regional Health Planning Council (contact information can be found on the Access to Care Schedule). CIED also runs a report that shows eligibility status. Clients whose eligibility has expired are called by CIED. Additionally, clients who have upcoming dates for required recertification, receive phone calls 45 days prior to their recertification date. She also noted that when appointments are scheduled with CIED, providers need to communicate with the client to bring all appropriate paperwork. A CIED administrative assistant will give the client a call a day prior or the same day as a reminder to bring in the appropriate documents to recertify eligibility. Additionally, the Recipient Staff recommended that providers who meet with clients who have lost eligibility may want to consider referring the client to the Test & Treat program to rapidly engage the client in care and establish temporary eligibility so that the client can be restarted on antiretroviral therapy (ART).

The Network discussed the potential and possibilities of the online eligibility portal for both ADAP and Ryan White Part A.

III. **PDSA Cycle Activity**

The CQM Support Staff conducted an activity to promote the use and understanding of the PDSA cycle. The PDSA Cycle (or Plan-Do-Study-Act Cycle) is a method used in quality improvement to test for change. Once a hypothesis is formed and an intervention is conducted, the PDSA cycle captures how much the intervention impacted the variable in which it is applied to. The following is a link to the video describing the activity in which the Network participated: <https://www.youtube.com/watch?v=evVIMpzahc8>

IV. **PDSA Cycle Discussion**

Following the activity, the Network discussed the data findings and process results of the activity. Additionally, the CQM Support Staff provided the Network with a PDSA Cycle Worksheet. This worksheet is a useful tool for documenting the PDSA Cycle and tracking the results of the Network members' interventions. It not mandatory for the Network members to use the worksheet for their projects.

V. **Mentimeter Break**

Network members engaged in a Mentimeter survey. The following are the questions and the resulting data:

“Please indicate your agreement with the following statements on a scale of 1 (strongly disagree) to 5 (strongly agree).”

Average Scores

- This activity Helped expand my understanding of the PDSA Cycle: 4.6
- It is important to track and measure the effectiveness of all activities performed within the PDSA Cycle: 4.8
- I expect success from my first PDSA Cycle: 4.5

“How will you quantitatively (with Numbers) measure your first PDSA cycle?”

Results

- Review viral load values
- We have not decided yet
- Not sure
- Days to transition

- We ran a report on PE to see how many clients we have that are not virally suppressed then evaluated the data to see if there was a link between viral load and patients missing appointments
- Review viral load values
- Viral Load analysis
- Initial appointment missed count compared to the first 30 days
- Gain a denominator from client served that fit our criteria

“How will you qualitatively (with statements) measure your first PDSA cycle?”

- Undecided
- Feedback surveys from Case Management clients
- Survey and one-on-one interviews
- Review of results as well as discussion with staff for feedback
- We are going to create a survey for clients to complete to see if we can find any links between reasons they’re failing their appointments and viral load

VI. QIP Documentation Tool

The first Root Cause/Driver, Change Idea, and Plan sections of the documentation tool are to be submitted to the CQM Support Staff by Friday, October 4th.

VII. Announcement(s)

VIII. Evaluations

IX. Adjournment

The meeting was adjourned at 11:06 a.m.

Next Meeting Date: October 30, 2019 at 2:30p.m.

I. Call to Order

The meeting was called to order at 9:45a.m.

II. Welcome/Introductions

CQM Staff welcomed everyone and individual introductions were made.

III. Video & Discussion: Driver Diagram

Network members were introduced to the concept of a “Driver Diagram” through an educational video from the [Institute of Healthcare Improvement](#). Once members develop their AIM statement, the next step is to understand the root causes or

“drivers” of the problem being studied. For example, if the goal is to increase retention, a root cause/driver may be transportation barriers.

CQM Staff emphasized that the QIPs each agency develops should focus on improving viral load suppression, either directly or indirectly. QIPs should be simple, measurable, data-driven, and effective. The purpose of these QIPs are to effect positive change in people with HIV.

IV. QIP Documentation Tool

CQM Staff described and explained how to use the documentation tool to track a QIP. Once members have identified their root causes in the QIP documentation tool, the next steps in the process are the identification of potential interventions that have the potential to improve the desired outcome, followed by PDSA-cycle development and PDSA initiation.

V. 1-1 Meetings with CQM (AIM Statement Feedback)

CQM staff met individually with each agency representative to provide constructive feedback on their AIM statement. Network members were given three additional days to update their AIM based on the feedback received at the meeting. The deadline for completion of QIPs is December 31st, 2019.

VI. Next Steps

CQM staff shared that the Quality Managers will be asked to complete the second page of the QIP Documentation Tool towards the end of August 2019. An email will be sent to all Quality Managers by the CQM team with a two-week requested completion timeline for this next step in the QIP process.

VI. Adjournment

The meeting was adjourned at 11:30 a.m.

QI ESSENTIALS TOOLKIT: PDSA Worksheet

The Plan-Do-Study-Act (PDSA) cycle is a useful tool for documenting a test of change. Running a PDSA cycle is another way of saying testing a change — you develop a plan to test the change (Plan), carry out the test (Do), observe, analyze, and learn from the test (Study), and determine what modifications, if any, to make for the next cycle (Act).

Fill out one PDSA worksheet for each change you test. In most improvement projects, teams will test several different changes, and each change may go through several PDSA cycles as you continue to learn. Keep a file (either electronic or hard copy) of all PDSA cycles for all the changes your team tests.

IHI's QI Essentials Toolkit includes the tools and templates you need to launch and manage a successful improvement project. Each of the 10 tools in the toolkit includes a short description, instructions, an example, and a blank template.

- Cause and Effect Diagram
- Driver Diagram
- Failure Modes and Effects Analysis (FMEA)
- Flowchart
- Histogram
- Pareto Diagram
- **PDSA Worksheet**
- Project Planning Form
- Run Chart & Control Chart
- Scatter Diagram

These materials may not be reproduced for commercial, for-profit use in any form or by any means, or republished under any circumstances, without the written permission of the Institute for Healthcare Improvement.

Instructions

Plan: Plan the test, including a plan for collecting data.

- State the question you want to answer and make a prediction about what you think will happen.
- Develop a plan to test the change. (Who? What? When? Where?)
- Identify what data you will need to collect.

Do: Run the test on a small scale.

- Carry out the test.
- Document problems and unexpected observations.
- Collect and begin to analyze the data.

Study: Analyze the results and compare them to your predictions.

- Complete, as a team, if possible, your analysis of the data.
- Compare the data to your prediction.
- Summarize and reflect on what you learned.

Act: Based on what you learned from the test, make a plan for your next step.

- Adapt (make modifications and run another test), adopt (test the change on a larger scale), or abandon (don't do another test on this change idea).
- Prepare a plan for the next PDSA.

Example: PDSA Worksheet

Objective: Test using Teach-Back (a closed-loop communication model, in which the recipient of information repeats the information back to the speaker) with a small group of patients, in hopes of improving patients' understanding of their care plans.

1. **Plan:** Plan the test, including a plan for collecting data.

Questions and predictions:

- How much more time will it take to use Teach-Back with patients? *It will take more time at first (5 to 10 minutes per patient), but we will start to learn better communication skills and get more efficient.*
- Will it be worthwhile? *The extra time will feel worthwhile (and possibly prevent future rework).*
- What will we do if the act of “teaching back” reveals a patient didn’t understand the care plan? *If a patient is not able to explain his or her care plan, we will need to explain it again, perhaps in a different way.*

Who, what, where, when:

On Monday, each resident will test using Teach-Back with the last patient of the day.

Plan for collecting data:

Each resident will write a brief paragraph about their experience using Teach-Back with the last patient.

2. **Do:** Run the test on a small scale.

Describe what happened. What data did you collect? What observations did you make?

Three residents attempted Teach-Back at the end of the day on Monday. Two residents did not find anything they needed to ask patients to Teach-Back. Jane found that her patient did not understand the medication schedule for her child. They were able to review it again and, at the end, Jane was confident the mother was going to be able to give the medication as indicated.

3. **Study:** Analyze the results and compare them to your predictions.

Summarize and reflect on what you learned:

- Prediction: It will take more time at first (5 to 10 minutes per patient), but we will start to learn better communication skills and get more efficient. *Result: Using Teach-Back took about 5 minutes per patient.*
- Prediction: The extra time will feel worthwhile (and possibly prevent future rework). *Result: Jane felt the time she invested in using Teach-Back significantly improved the care experience.*
- Prediction: If a patient is not able to explain his or her care plan, we will need to explain it again, perhaps in a different way. *Result: After a second review of the medication orders, the patient was able to Teach-Back the instructions successfully.*

In addition to the team confirming all three predictions, Jane realized the medication information sheets she had been handing out to parents weren't as clear as she thought. She realized these should be re-written — maybe with the input of some parents.

4. **Act:** Based on what you learned from the test, make a plan for your next step.

Determine what modifications you should make — adapt, adopt, or abandon:

Jane is planning to use Teach-Back any time she prescribes medication. Although it may take more time, she now understands the importance. The other residents are going to work on using Teach-Back specifically for medications for the next week.

They would like to pull together a team to work on some of the medication information sheets with parent input, but they are first going to gather more information through more interactions in the coming days.

Template: PDSA Worksheet

Objective:

1. **Plan:** Plan the test, including a plan for collecting data.

Questions and predictions:

- ---

- ---

Who, what, where, when:

Plan for collecting data:

2. **Do:** Run the test on a small scale.

Describe what happened. What data did you collect? What observations did you make?

3. **Study:** Analyze the results and compare them to your predictions.

Summarize and reflect on what you learned:

4. **Act:** Based on what you learned from the test, make a plan for your next step.

Determine what modifications you should make — adapt, adopt, or abandon:
